

Energy Management at GKD – Gebr. Kufferath AG

GKD – Gebr. Kufferath AG has set the goal of optimizing the longevity and sustainability of the energy consumption. Therefore an Energy Management System according to DIN EN ISO 50001:2011 has been installed and put into operation.

We have obligated ourselves to increase our potential energy efficiency. Through continued measurement we seek to potentially optimize our energy consumption and energy usage. Because of the above-mentioned an Energy Management Representative has been appointed.

Internally, we have made available all necessary information and resources.

We also require that all lawful demands of energy efficiency, energy consumption and energy usage be met with expertise. We are duly obliged and obligate ourselves that the above-mentioned requirements are not a result of an arrangement with our customers or any other third party.

Because of the defined limits we set ourselves detailed and measurable targets for our energy efficiency and our energy consumption on a continued basis.

Additional information for suppliers regarding energy

In the phase of procurement we prefer energy efficient products, equipment and services. For this purpose we regard a comparison of possible variations to be necessary not only for the isolated acquisition costs, but also follow-up costs regarding the energy consumption during the expected duration of use.

Concerning this we expect from our suppliers to give us active support with regard to a possible optimization on our energy input, energy consumption and as well as energy efficiency.
