

Sun protection with a view

GKD: External roller blinds made of metallic mesh for sustainable architecture

WORLD WIDE WEAVE

Picture 1: External, roll-up sun protection systems made from metallic mesh supplied by the company GKD protect the large, glazed second floor from overheating or undesirable insights.

Picture 2: With their purist look, the metal roller blinds shimmer in the sunlight and underline the overall architectural concept.

Picture 3: The chosen mesh type, Licorne 13A, has a normal-normal energy transmission level of just 0.2. That means 80 percent of the solar energy input is dissipated through reflection or diffusion.

Picture 4: The innovative roller blinds allow - even with the blinds fully rolled down - undisturbed views of the outside world.
